Grayson, GA (Atlanta Metro) | Portfolio: afotouhi-cyber.github.io

Professional Summary

Military Veteran and Security Analyst with 3.5 years of experience protecting enterprise environments through security operations, detection engineering, vulnerability management, and identity security. Experienced supporting organizations with more than 20,000 endpoints by investigating threats, improving detections, and strengthening security capabilities. Passionate about building practical cybersecurity solutions.

SKILLS

- **Security Operations:** Rapid7 InsightIDR, CrowdStrike Falcon, Microsoft Defender, Proofpoint
- **Detection & Response:** SIEM, EDR, Detection Engineering, Threat Hunting, Incident Response, Vulnerability Management, MITRE ATT&CK
- **Infrastructure & Identity:** Active Directory, Azure, Palo Alto, Guardicore, PAM, PKI
- **Operating Systems & Scripting:** Windows, Linux, Ubuntu Server, Python, PowerShell

EXPERIENCE

Security Operations Center (SOC) Analyst

Kohler Co – (Contract via TEKsystems)

December 2024 – June 2026

- Investigated and triaged threats across 20,000+ endpoints using CrowdStrike Falcon EDR, supporting incident containment and response
- Correlated endpoint, identity, and SIEM telemetry to identify malicious activity and support enterprise threat investigations
- Configured and managed access for 30+ third party vendors through PAM solutions, enforcing least privilege principles
- Issued, and renewed hundreds of internal PKI certificates for servers, workstations, and mobile devices
- Conducted identity and endpoint investigations using Active Directory, supporting incident response and access control reviews
- Collaborated with engineering and security teams to tune detections, improve alert fidelity, and document incident response activities

Information Security Associate

University of Wisconsin Milwaukee

June 2022 – May 2024

- Managed endpoints for 27,000+ users using Microsoft Defender and Cisco Secure Endpoint (AMP)
- Investigated account compromises, phishing campaigns, and suspicious logins using Microsoft Defender and Azure AD
- Reduced phishing click rates by 18% through targeted awareness initiatives and detection improvements
- Built Power BI dashboards to visualize phishing trends and attack frequency

CERTIFICATIONS

CompTIA Security+

April 2024

CompTIA CySA+

October 2025

CompTIA Security Analytics Professional

October 2025

EDUCATION

Bachelor of Science in Information Science and Technology

May 2024

University of Wisconsin – Milwaukee

Honors in the Major

Cybersecurity Certificate

Thesis: Developed a machine learning model in Python to identify phishing and scam messages

OTHER EXPERIENCE

15H Aircraft Pneudraulics Mechanic

Wisconsin Army National Guard - Secret Clearance (Inactive)

April 2016 – April 2023

- Deployed as part of an Aviation Support Battalion to the Middle East (2017-2018)
 - Led teams maintaining 30+ aircraft worth \$150 million+, diagnosing hydraulic and pneumatic systems
 - Ensured compliance with technical orders and quality control requirements
 - Produced accurate and concise technical documentation to support maintenance continuity
-

TECHNICAL PROJECTS

Detection Engineering Lab (Wazuh • Sysmon • Atomic Red Team)

- Designed and deployed a Wazuh SIEM lab on Ubuntu Server with Windows and Linux endpoints for centralized security monitoring
- Developed and validated custom Wazuh detection rules using Microsoft Sysmon telemetry and Atomic Red Team attack simulations, including detection of PowerShell EncodedCommand execution (MITRE ATT&CK T1059.001)
- Mapped custom detections to the MITRE ATT&CK framework and documented the complete detection engineering workflow through a personal cybersecurity portfolio

Python Security Scanner

- Developed a Python application that inventories Windows systems, analyzes installed software, open ports, and running processes, and generates HTML security assessment reports
- Published source code and technical documentation through GitHub and a personal cybersecurity portfolio
